OmniPayments is Now an Authorized NonStop and Atalla Reseller in Latin America

OmniPayments Inc., creator of the NonStop-based financial transaction switch of the same name, is now an authorized reseller in Latin America of HPE NonStop servers and HPE Atalla security products.

OmniPayments is the product arm of Opsol Integrators, a leading HPE NonStop system integrator. Opsol is short for Open Solutions, and the company specializes in porting open-source solutions to NonStop servers running under OSS. That background allows the OmniPayments team to upsell to existing NonStop customers as well as to introduce the value of NonStop technology to companies who want to port their other open-source systems to a fault-tolerant, always-on architecture. OmniPayments also has built a reputation for rapid responses to customer requests.

OmniPayments serves a global audience, with seven data centers worldwide. The company's presence in Latin America has been particularly successful, with a large installed base in several countries. In areas where HPE does not offer 24x7 support, Opsol provides managed services for remote production monitoring.

OmniPayments success stories in Latin America include:

OmniPayments Success In Latin America

Colombia's Families-in-Action program employs the OmniPayments Financial Transaction Switch to distribute cash subsidies from Banco Agrario to poor mothers.

Mexican grocery store chain Casa Ley uses OmniPayments in an active/active configuration to handle payment-card transactions.

The Dominican Republic deploys OmniPayments as its country-wide financial transaction switch.

One of Latin America's largest Electronic Payments Systems (EPS) providers counts on OmniPayments preauthorization services for over 200 million transactions per month.

Consulting and services giant Carvajal selected OmniPayments as the foundation for its transaction networks.

OmniPayments provides correspondent banking services to remote Latin American regions that cannot support bank branches.

www.omnipayments.com

OmniPayments is a switching solution for the financial and retail industries. It is deployed on NonStop for the highest availability and offers all the requisite functionality to manage credit/debit-card transactions. It manages multiple devices, hosts application interfaces, and interoperates with third-party products or other systems if required. OmniPayments easily expands to provide additional functionality when needed and supplies complete security functions for every financial transaction handled, including encryption-at-rest and encryption-in-flight. Available around the clock, OmniPayments will survive any single fault, requires no downtime for maintenance or upgrades, and supports a range of disaster-recovery solutions.

OmniPayments can be installed either as a complete, off-the-shelf solution or can be enhanced with customer-requested modifications and features to improve cost-effectiveness, efficiency, and risk mitigation. Our team of 100-plus NonStop specialists are skilled at rapid project turnarounds and meeting deadlines.

OmniPayments also distributes OmniCloudX on NonStop X. OmniCloudX hosts numerous OmniPayments instances at a pay-for-use price so attractive that mid-size retailers and financial organizations now can enjoy the benefits of having their own high-capacity transaction switches. Starts at only $5,000 USD per month.

The OmniPayments Preauthorization Engine is used by financial institutions in conjunction with the OmniPayments Financial Transaction Switch or as a seamless interface to other providers' switches via a custom support module (CSM). We call it the *Fraud Blocker*!

OmniPayments systems in production today process 700 million transactions per month, generated by point-of-sales terminals and over 14,000 ATMs. A single OmniPayments system supports up to 10,000 transactions per second. Multiple OmniPayments systems can cooperate to provide any capacity required by an application. From our seven worldwide locations, we serve as a 24×7 managed services provider for remote production monitoring.
