Yash Kapadia Keynote Presentation

Migrate to NonStop X – No Fuss, No Muss, No Sweat!

Yash Kapadia is not into pain – especially the pain that often accompanies the challenges of moving stable applications from one system to an entirely new platform. Scary stuff. But as CEO of Opsol Integrators and OmniPayments, Yash and his team have mastered the skills to manage painless migrations for a host of relieved customers.

Yash's presentation is directed at those attendees who covet NonStop X's blazing speed and open development environment yet who admittedly are petrified by the prospect of a migration nightmare. Whether saying farewell to an Integrity NonStop BladeSystem or to a generations-old K-Series server, the benefits of moving to NonStop X far outweigh the few issues that have been reported by users to-date.

That certainly has been Yash's experience. OmniPayments was the first NonStop partner to take delivery of a NonStop X. Yash liked it so much that he invested in several more and then migrated his entire payments system from NonStop Itanium into OmniCloudX, the first-ever cloud on a NonStop X. Were there issues? Some. Was it difficult? Not at all. Learn from Yash's perspective on why migrating to this impressive platform will be a pain-free experience for you.

Speaker Biography

Yash Kapadia
CEO, OmniPayments LLC

When CEO Yash Kapadia left his tenure as a developer at Tandem Computers, he did not abandon Tandem's NonStop platform. Instead, he founded Opsol Integrators, now the leading HP NonStop system integrator. Yash's background led to Opsol's reputation as an integrator whose team successfully takes on complex custom integration and migration projects, completing them on time and well within the scopes of fixed-price contracts. Out of Opsol came OmniPayments a popular financial-transaction switch. yash@omnipayments.com
